CODEN: TOSCF2; ISSN: 1096-6080
PUBLISHER: Oxford University Press
DOCUMENT TYPE: Journal
LANGUAGE: English

AB Gap junctional intercellular communication (GJIC) is the major pathway of
intercellular signal transduction, and is thus important for normal cell
growth and function. Recent studies have revealed a global distribution
of some perfluorinated org. compds., esp. perfluorooctane sulfonic acid
(PFOS) in the environment. Because other perfluoroalkanes had been shown
to inhibit GJIC, the effects of PFOS and related sulfonated fluorochems.
on GJIC were studied using a rat liver epithelial cell line (WBF344) and a
dolphin kidney epithelial cell line (CDK). In vivo effects on GJIC were
studied in Sprague-Dawley rats orally exposed to PFOS for 3 days or 3 wk.
Effects on GJIC were measured using the scrape loading dye technique.
PFOS, perfluorooctane sulfonamide (PFOA), and perfluorohexane sulfonic
acid (PFHA) were found to inhibit GJIC in a dose-dependent fashion, and
this inhibition occurred rapidly and was reversible. Perfluorobutane
sulfonic acid (PFBS) showed no significant effects on GJIC within the
concn. range tested. A structure activity relationship was established
among all 4 tested compds., indicating that the inhibitory effect was
dett. by the length of fluorinated tail and not by the nature of the
functional group. The results of the studies of the 2 cell lines and the
in vivo exposure were comparable, suggesting that the inhibitory effects
of the selected perfluorinated compds. on GJIC were neither species nor
tissue-specific and can occur both in vitro and in vivo.

OTHER SOURCE(S): MARPAT 135:196652

AB Title polymer, demonstrating high elec. cond. and good impedance properties, useful as a cathode in secondary battery, was prep'd. by doping polythiophene with bis(perfluoroalkanesulfonyl)imide anion and/or tris(perfluoroalkanesulfonyl)methide anion. Thus, a cathodic electrolytic capacitor was prep'd. by using polythiophene having elec. cond. 15 S/cm (polymd. using FeCl3 in the presence of lithium bis(trifluoromethanesulfonyl)imide) in N-methylpyrrolidinone to give a battery showing capacitance 24 .mu.F and dielec. loss 0.9% at 120 Hz and equiv. resistance 5.OMEGA. at 100 kHz.

AB

The invention is an improved method for the prepn. of tertiary phosphines by way of cross-coupling of aryl, alkenyl, cycloalkenyl or aralkyl halides or aryl, alkenyl, cycloalkenyl or aralkyl sulfonate esters with chlorophosphines in the presence of a catalyst and a reductant. Thus, nickel-catalyzed reaction of R1Xn with ClPR2R3 in the presence of a reductant gave title compds., R1(PR2R3)n, (R1 = aryl, alkenyl, cycloalkenyl, aralkyl, any of which may be substituted by one or more of the following: alkyl, aryl, aralkyl, alkoxy, alkanoyl, chloro, fluoro, alkoxy carbonyl, cyano, trifluoromethyl, cycloalkyl, or CONR4R5 wherein R4 and R5 are independently hydrogen, alkyl, aryl or aralkyl; R2 and R3 are independently aryl, alkyl, aralkyl, any of which may be substituted by one or more of the following: alkyl, aryl, arylalkyl, alkoxy, alkanoyl, chloro, fluoro, alkoxy carbonyl, cyano, trifluoromethyl, cycloalkyl or CONR4R5 wherein R4 and R5 are independently hydrogen, alkyl, aryl or aralkyl; n = 2 where R1 is a difunctional moiety and 1 for any other R1; X = Cl, Br, I, OSO2Y; Y = alkyl, trihalomethyl, Ph, halophenyl, or alkylphenyl).

AB Specified 2'-diarylphosphino-1,1'-biphenylene-2-yloxy(6,6'-divinyl-1,1'-binaphthalene -2,2'-diyl)phosphine derivs. are useful in polymers and transition metal complexes. Also disclosed are a polymer having structural units derived from the phosphine deriv. and a transition metal complex obtained by causing a transition metal compd. to act on the phosphine deriv. or the polymer. A novel polymer-supported ligand is provided which, when used as a catalyst for asym. syntheses, gives satisfactory results concerning catalytic activity, enantiomer excess, etc.

I

AB Compd. I (X = PAR₂), ligand of a catalyst complex useful for asym. syntheses, was prepd. in an economical way by reacting compd. I (X = OTf) with phosphine oxides Ar₂P(O)H in the presence of a transition metal/phosphine complex. In I, the double line consisting of a continuous line and a dotted line signifies either a double bond or a single bond, resp. forming part of a naphthalene ring or an octahydronaphthalene ring depending on whether the naphthalene ring was subjected to the redn. or not; Tf represents a trifluoromethanesulfonyl group; and Ar represents a Ph group, a substituted Ph group (bearing 1 to 3 substituents which may be the same or different and are selected from the group consisting of halogen atoms, lower alkyl group, lower alkoxy group and halogenated lower alkyl group) or a naphthyl group which may bear a lower alkyl or lower alkoxy substituent. For example, (S)-2,2'-bis(trifluoromethanesulfonyloxy)-1,1'-binaphthyl was reacted with bis(2-naphthyl)phosphine oxide in the presence of Pd(OAc)₂, Ph₂P(CH₂)₃PPh₂, NaO₂CH and 1Pr₂EtN in DMSO to give 75% (S)-2-bis(2-naphthyl)phosphinyl-2'-(trifluoromethanesulfonyloxy)-1,1'-binaphthyl (1). 1 Was reduced to the phosphino analog (2) using Cl₃SiH and dimethylaniline in toluene in 84% yield. 2 Was substituted with bis(2-naphthyl)phosphine oxide in DMF in the presence of Ni(dppe)Cl₂ and DABCO to give 56% (S)-2-bis(2-naphthyl)phosphino-2'-bis(2-naphthyl)phosphinyl-1,1'-binaphthyl (3). 3 Was reduced similarly to 1 to give (S)-2,2'-bis(bis(2-naphthyl)phosphino)-1,1'-binaphthyl in 87% yield.

I

AB Water-sol. sulfonated aryl bis(phosphine)s I are claimed. In I, X and Y = C1-20 alkyl, alkenyl or alkynyl, Ph, naphthyl, NR (R = H, C1-20 alkyl, phenyl), O, S; m and m' = 0, 1; R1-R8 = H, halogen, nitro, amino, C1-20 alkyl, alkoxy, OH, CO2R, CN, SO3M, NR3+X- (X = halide), aryl; R1 and R2, R2 and R3, R3 and R4, R5 and R6, R6 and R7, R7 and R8 may also form a cyclic ring contg. a total of 2-6 atoms selected from C, O, N, S and

mixts. thereof; R9-R12 and R14-R18 = H, halogen, SO₃M, C1-20 alkyl, CO₂M, NR₃+X-, CN, OR, CO₂R, PR₂; R13 = C1-20 alkyl, alkenyl, alkynyl, Ph, naphthyl, anthracyl; n = 1-20; M = alkali, alk. earth metal, NR₄+; R = H, C1-20 alkyl, Ph. I can be complexed with a transition metal to form a novel two-phase catalyst useful in such applications as hydroformylation and asym. hydrogenation. For example, 1-octene was hydroformylated in the presence of a Rh complex of tetrasulfonated 2,2'-bis(bis(4-(3-phenylpropyl)phenyl)phosphinomethyl)-1,1'-biphenyl giving 74% C9 aldehydes, 93% of which was 1-nonanal. As another example, acetophenone N-benzylimine was hydrogenated by a Rh complex of (R)-2,2'-bis(bis(4-(3-(4-sulfonatophenyl)propyl)phenyl)phosphino)-1,1'-binaphthalene with 98% yield and 56% ee.

AB The present invention provides a method for producing novel optically active diphosphine compds. [e.g., 2,2'-bis(di-substituted phosphino)-1,1'-binaphthyl compds.] that have selectivity such as chemoselectivity or enantioselectivity and catalytic activity different from those possessed by conventional BINAP compds. In a method of the present invention for producing an optically active diphosphine compd., i. e. 2,2-bis(di-substituted phosphino)-1,1'-binaphthyl, 2,2'-bis(trifluoromethanesulfonyloxy)-1,1'-binaphthyl (1) is reacted, in the presence of a transition metal-phosphine complex, with a phosphine oxide compd. expressed by the following general formula, A2P(O)H wherein A indicates a Ph group; a mono- to trisubstituted Ph group, wherein each substituent in the substituted Ph group is individually selected from halogen atoms, lower alkyl groups, lower alkoxy groups or lower halogenated-alkoxy groups such that one or more of the substituents may be the same or different; a naphthyl group; a lower-alkyl naphthyl group; or a lower-alkoxy naphthyl group. E.g., (S)-1 reacts with NiCl₂(dppe) and N-methylpiperidine in DMF solvent at room temp. for 15 mins. and 100.degree. for another 15 mins. followed by addn. of di(2-naphthyl)phosphine oxide to give (S)-2-di(2-naphthyl)phosphinyl-2'-di(2-naphthyl)phosphino-1,1'-binaphthyl (2) in 40% yield. 2 is reduced by Cl₃SiH/dimethylaniline/toluene to give (S)-2,2'-bis[di(2-naphthyl)phosphino]-1,1'-binaphthyl (3) in 87% yield. 3 Reacts with [Ru(p-cymene)]I₂ to give [Ru(p-cymene)(3)]I which catalyzes the asym. redn. of Me 2-benzamidemethyl-3-oxobutyrate to give syn and anti-alcs. in 87:13 ratio.

I

II

AB Phosphine-phosphinite compds. (R)-I (R1, R2 = substituted or unsubstituted Ph, naphthyl) and a process for prep. a 4-[(R)-1'-formylethyl]azetidin-2-one deriv. II (R3 = H, protective group for a hydroxyl group) using (R)-I are claimed. (R)-I, either in combination, or as a complex, with a transition metal compd., is useful as a catalyst for asym. hydroformylation and makes it possible to easily synthesize an important intermediate for carbapenem antibiotics or a precursor thereof at high

regioselectivity and diastereoselectivity. For example, (3S,4R)-3-((R)-1-tert-butyltrimethylsilyloxy)ethyl-4-((R)-1'-formylethyl)azetidin-2-one, (3S,4R)-3-((R)-1-tert-butyltrimethylsilyloxy)ethyl-4-((S)-1'-formylethyl)azetidin-2-one, and (3S,4R)-3-((R)-1-tert-butyltrimethylsilyloxy)ethyl-4-(2-formylethyl)azetidin-2-one were formed in 68.4/3.6/28 ratio and, after chromatog., a 68% yield of the 1st 2 compds. with 95/5 isomer ratio was obtained in the presence of (R)-I (R1 = 3,5-dimethylphenyl; R2 = Ph) and [Rh(COD)Cl]₂; other phosphine-phosphinite compds. such as (R)-I (R1 = Ph; R2 = OPh) gave significantly inferior results. The detailed prepn. of (R)-I (R1 = 3,5-dimethylphenyl; R2 = Ph) is given and results of catalytic tests are given for about 20 (R)-I.

AB The title compds. [I; R = PPh₂; R₁ = C₁-4 alkyl, (un)protected HO, C₁-4 alkoxy, C₁-4 acyl, (un)protected CO₂H, C₁-4 alkoxycarbonyl], which are useful as chiral ligands for catalytic asym. induction, are prepd. by reaction of sulfonate esters I (R = OSO₂CF₃, OSO₂Me, OSO₂C₆H₄Me-p) with diphenylphosphine in the presence of an amine base and a nickel catalyst. The nickel catalyst is selected from NiCl₂.bis(diphenylphosphinyl)-C₁-4 alkane, NiBr₂, NiCl₂, NiCl₂.bis(diphenylphosphinyl)ferrocene (II), NiCl₂.bis(triphenylphosphine), Ni.tetrakis(triphenylphosphine), Ni.tetrakis(triphenylphosphite), and Ni.dicarbonylbis(triphenylphosphine). The amine base is selected from 1,4-diazabicyclo[2.2.2]octane (DABCO), Et₃N, diisopropylethylamine, tri(n-propyl)amine, and tri(n-butyl)amine. This reaction is carried out in DMF, MeCN, and N-methylpyrrolidinone without racemization. Thus, I (R = OH, R₁ = 7- and 7'-OMe) was triflated by triflic anhydride in pyridine at 0.degree. for 3 h to give I (R = OSO₂CF₃, R₁ = 7- and 7'-OMe) (III). Ph₂PH (4.7 mmol) was added to a soln. of 1.6 mmol II in 15 mL DMF and heated at 100.degree. for 30 min, followed by adding a soln. of 8.18 mmol III and 32.8 mmol DABCO in DMF, and the resulting mixt. was heated at 100.degree. in dark overnight, while adding twice diphenylphosphine after 1.5 and 4.5 h, to give I (R = PPh₂, R₁ = 7- and 7'-OMe).

I

AB A process of synthesis of (BINAP), important chiral ligand for catalytic asym. induction, is described. Thus, [NiCl2(dppe)]-catalyzed

phosphinylation of (R)-ditriflate of 1,1'-bi-2-naphthol with Ph2PH in the presence of DABCO in DMF gave (R)-(+)-BINAP I.

AB Title compds. [I; R = alkyl, OR₂; R₁ = Ph, pentafluorophenyl; R₂ = H, cycloalkyl, (halo)alkyl, (alkoxy)alkoxy, Ph), were prepd. Thus, (S)-2,2'-binaphthol was stirred with (F₃CSO₂)₂ and pyridine in CH₂Cl₂ overnight to give 92% bis-triflate which was stirred with Ph₂P(O)H, Pd(OAc)₂, and 1,4-bis(diphenylphosphino)butane in Me₂SO at 100.degree. for 12 h to give 96% (S)-(-)-2-trifluoromethanesulfonyl-2'-diphenylphosphinoyl-1,1'-binaphthyl. The latter was hydrolyzed with 3N NaOH in MeOH/dioxane in 81.5% yield and the product was O-methylated with MeI/K₂CO₃/acetone (98%) and reduced with Cl₃SiH/Et₃N in xylene (79%) to give 19% (S)-II. This was used to enantioselectively hydrosilylate 1-phenyl-1,3-butadiene with Cl₃SiH.
